M-DUINO GPRS PLC ARDUINO FAMILY

M-DUINO GPRS PLC ARDUINO FAMILY

PLC MDuino GPRS Family User Guide

Revised September 2022

Preface

This User Guide has been implemented by Boot & Work, S.L. working under the name Industrial Shields.

Purpose of the manual

The information contained in this manual can be used as a reference to operating, to functions, and to the technical data of the signal modules, power supply modules and interface modules.

Intended Audience

This User Guide is intended for the following audience:

- Persons in charge of introducing automation devices.
- Persons who design automation systems.
- Persons who install or connect automation devices.
- Persons who manage working automation installation.

Warnings:

- Unused pins should not be connected. Ignoring the directive may damage the controller.
- Improper use of this product may severely damage the controller.
- Refer to the controller's User Guide regarding wiring considerations.
- Before using this product, it is the responsibility of the user to read the product's User Guide and all accompanying documentation.
- Maintenance must be performed by qualified personnel familiarised with the construction, operation, and hazards involved with the control.
- Maintenance should be performed with the control out of operation and disconnected from all sources of power.
- Care should be taken when servicing electrostatic sensitive components. The manufacturer's recommendations for these components should be followed.

- The M-Duino GPRS Family PLCs are Open Type Controllers. It is required that you install the M-Duino GPRS PLC in a housing, cabinet, or electric control room. Entry to the housing, cabinet, or electric control room should be limited to authorised personnel. Failure to follow these installation requirements could result in severe personal injury and/or property damage. Always follow these requirements when installing M-Duino family PLCs.
- In case of installation or maintenance of the M-Duino please follow the instructions marked in the Installation and Maintenance section.
- Do not disconnect equipment when a flammable or combustible atmosphere is present. Disconnection of equipment when a flammable or combustible atmosphere is present may cause a fire or explosion which could result in death, serious injury and/or property damage.

Avertissements:

- Les broches non utilisées ne doivent pas être connectées. Ignorer la directive peut endommager le contrôleur.
- Une utilisation incorrecte de ce produit peut endommager gravement le contrôleur.
- Reportez-vous au Guide de l'utilisateur du contrôleur pour les considérations de câblage.
- Avant d'utiliser ce produit, il incombe à l'utilisateur de lire le Guide de l'utilisateur du produit et la documentation qui l'accompagne.
- La maintenance doit être effectuée par personnel qualifié familiarisé avec la fabrication, le fonctionnement et les dangers liés au contrôleur.
- La maintenance doit être effectuée avec l'équipement hors service et déconnectée de toutes les sources d'alimentation.
- Faites attention lors de l'entretien des composants sensibles à l'électricité statique. Les recommandations du fabricant pour ces composants doivent être suivies.
- Les automates de la famille M-Duino sont des contrôleurs de type ouvert. Il est nécessaire d'installer l'automate M-Duino dans un boîtier, une armoire ou une salle de contrôle électrique. L'accès au boîtier, à l'armoire ou à la salle de commande électrique doit être limité au personnel autorisé. Le non-respect de ces exigences d'installation peut entraîner des blessures graves et/ou des dommages matériels importants. Respectez toujours ces exigences lors de l'installation des automates de la famille M-Duino.
- En cas d'installation ou de maintenance du M-Duino, veuillez suivre les instructions indiquées dans la section Installation et Maintenance.
- Ne débranchez pas l'équipement en présence d'une atmosphère inflammable ou combustible. La déconnexion de l'équipement en présence d'une atmosphère inflammable ou combustible peut provoquer un incendie ou une explosion pouvant entraîner la mort, des blessures graves et/ou des dommages matériels.

Application Considerations and Warranty

Read and Understand this Manual

Please read and understand this manual before using the product. Please consult your comments or questions to Industrial Shields before using the product.

Application Consideration

THE PRODUCTS CONTAINED IN THIS DOCUMENT ARE NOT SAFETY RATED. THEY SHOULD NOT BE RELIED UPON AS A SAFETY COMPONENT OR PROTECTIVE DEVICE FOR ENSURING SAFETY OF PERSONS, AS THEY ARE NOT RATED OR DESIGNED FOR SUCH PURPOSES.

Please know and observe all prohibitions of use applicable to the products.

FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, NEVER USE THE INDUSTRIAL SHIELDS PRODUCTS.

NEVER USE THE INDUSTRIAL SHIELDS PRODUCTS BEFORE THEY ARE PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Industrial Shields shall not be responsible for conformity with any codes, regulations or standards that apply to the combination of products in the customer's application or use of the product.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses may be suitable for the products:

- Systems, machines, and equipment that could present a risk to life or property.
- Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installation subject to separate industry or government regulations.
- Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this document.

At the customer's request, INDUSTRIAL SHIELDS will provide applicable third party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the system, machine, end product, or other application or use.

Intended use or of Industrial Shields products

Consider the following:

Industrial Shields products should only be used for the cases of application foreseen in the catalogue and the associated technical documentation. If third-party products and components are used, they must have been recommended or approved by Industrial Shields.

The correct and safe operation of the products requires that your transport, storage, installation, assembly, operation and maintenance have been carried out in a correct It must respect the permissible ambient conditions. You should also follow the indications and warnings that appear in the associated documentation.

The product / system dealt with in this documentation should only be handled or manipulated by qualified personnel for the task entrusted and observing what is indicated in the documentation corresponding to it, particularly the safety instructions and warnings included in it. Due to their training and experience, qualified personnel are in a position to recognize risks resulting from the handling or manipulation of such products / systems and to avoid possible hazards.

Disclaimers

Weights and Dimensions

Dimensions and weights are nominal and they are not used for manufacturing purposes, even when tolerances are shown.

Performance Data

The performance data given in this manual is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of INDUSTRIAL SHIELDS's test conditions, and the users most correlate it to actual application requirements. Actual performance is subject to the INDUSTRIAL SHIELDS Warranty and Limitations of Liability.

Errors and Omissions

The information in this document has been carefully checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical, or proofreading errors, or omissions.

The control and drive components of an Industrial Shields PLC are approved for industrial and commercial use in industrial line supplies. Their use in public line supplies requires a different configuration and/or additional measures. These components may only be operated in closed housings or in higher-level control cabinets with protective covers that are closed, and when all of the protective devices are used. These components may only be handled by qualified and trained technical personnel who are knowledgeable and observe all of the safety information and instructions on the components and in the associated technical user documentation. When carrying out a risk assessment of a machine in accordance with the EU Machinery Directive, the machine manufacturer must consider the following residual risks associated with the control and drive components of a PDS.

1. Unintentional movements of driven machine components during commissioning, operation, maintenance, and repairs caused by, for example: − Hardware defects and/or software errors in the sensors, controllers, actuators, and connection technology − Response times of the controller and drive − Operating and/or ambient conditions not within the scope of the specification − Condensation / conductive contamination − Parameterization, programming, cabling, and installation errors − Use of radio devices / cellular phones in the immediate vicinity of the controller − External influences / damage.

2. Exceptional temperatures as well as emissions of noise, particles, or gas caused by, for example: − Component malfunctions − Software errors − Operating and/or ambient conditions not within the scope of the specification − External influences / damage.

3. Hazardous shock voltages caused by, for example: − Component malfunctions − Influence of electrostatic charging − Induction of voltages in moving motors − Operating and/or ambient conditions not within the scope of the specification − Condensation / conductive contamination − External influences / damage

4. Electrical, magnetic and electromagnetic fields generated in operation that can pose a risk to people with a pacemaker, implants or metal replacement joints, etc. if they are too close.

5. Release of environmental pollutants or emissions as a result of improper operation of the system and/or failure to dispose of components safely and correctly.

Warranty and Limitations of Liability

Warranty

Industrial Shields's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by Industrial Shields.

INDUSTRIAL SHIELDS MAKES NO REPRESENTATION OR WARRANTY, EXPRESSED OR IMPLIED, REGARDING MERCHANTABILITY, NON-INFRINGEMENT, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. INDUSTRIAL SHIELDS DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED

Limitations of Liability

INDUSTRIAL SHIELDS SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

IN NO EVENT SHALL INDUSTRIAL SHIELDS BE RESPONSIBLE FOR WARRANTY, REPAIR OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS INDUSTRIAL SHIELDS'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

Table of Contents

1 General Description M-DUINO GPRS product

1.1 Zone - Nomenclature

The nomenclature shown in this point will be used in the whole User Guide, so it is important to understand this nomenclature.

The nomenclature to differentiate the zones is based on the Alphabet, being A the shield from below and D the shield from above. Having a B and a C in the middle of them.:
- The inputs in the zone B are named I0.X, being X any number suitable in the Shield. Outputs are named as Q0.X and relays as R0.X

- The inputs in the zone C are named I1.X, being X any number suitable in the Shield. Outputs are named as Q1.X and relays as R1.X

- The inputs in the zone D are named I2.X, being X any number suitable in the Shield. Outputs are named as Q2.X and relays as R2.X

2   Technical Specifications:
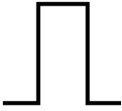

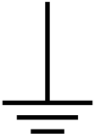

2.1   General Specifications:

Item		M-Duino GPRS Family PLC
Power supply voltage	DC power supply	12 to 24Vdc
Operating voltage range	DC power supply	11.4 to 25.4Vdc - - -
Power consumption	DC power supply	30W max.
External power supply	Power supply voltage	24Vdc ▬▬▬
	Power supply output capacity	700Ma
Insulation resistance		20MΩ min.at 500Vdc between the AC terminals and the protective earth terminal.
Dielectric strength		2.300 VAC at 50/60 Hz for one minute with a leakage current of 10mA max. Between all the external AC terminals and the protective ground terminal.
Shock resistance		80m/s^2 in the X, Y and Z direction 2 times each.
Ambient temperature (operating)		0º to 60ºC
Ambient humidity (operating)		10% to 90% (no condensation)
Ambient environment (operating)		With no corrosive gas
Ambient temperature (storage)		-20º to 60ºC
Power supply holding time		2ms min.
Weight		Check size and weight table

2.2   Performance Specification:

Arduino Board	ARDUINO MEGA 2560
Control method	Stored program method
I/O control method	Combination of the cyclic scan and immediate refresh processing methods.
Programming language	Arduino IDE. Based on wiring (Wiring is an Open Source electronics platform composed of a programming language. "similar to the C". http://arduino.cc/en/Tutorial/HomePage
Microcontroller	ATmega2560
Flash Memory	256KB of which 8KB are used by the bootloader
Program capacity (SRAM)	8KB
EEPROM	4KB
Clock Speed	16MHz
Clock Speed	16MHz

2.3 Symbology

Table that includes all the symbology that is used in the serigraph of the M-Duino GPRS PLC Family:

Symbol	Standard No. / Standard Title	Standard Reference No. / Symbol Title	Symbol Meaning
	IEC 60417 / Graphical symbols for use on equipment	5031 / Direct Current	Indicates that the equipment is suitable for direct current only; to identify relevant terminals
	IEC 60417 / Graphical symbols for use on equipment	5032 / Alternating Current	Indicates that the equipment is suitable for alternating current only; to identify relevant terminals
	IEC 60417 / Graphical symbols for use on equipment	5130 / Pulse General	To identify the control by which a pulse is started.
	IEC 60417 / Graphical symbols for use on equipment	5017 / Earth, Ground	To identify an earth (ground) terminal in cases where neither the symbol 5018 nor 5019 is explicitly required.
	IEC 60417 / Graphical symbols for use on equipment	5115 / Signal lamp	To identify the switch by means of which the signal lamp(s) is (are) switched on or off.
	2004/108/EC / Electromagnetic Compatibility	CE Marking	CE marking indicates that a product complies with applicable European Union regulations
	ISO 7000/ Graphical symbols for use on equipment	0434B / Warning symbol	Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury
	ISO 7000/ Graphical symbols for use on equipment	5036 / Dangerous Voltage	To indicate hazards arising from dangerous voltages

3   **Precautions**

Read this manual before attempting to use any of the M-Duino GPRS PLC Family and follow its descriptions for reference during operation.

3.1   Arduino Board

The M-Duino GPRS Family PLCs include Arduino Mega Board as controller.

3.2   Intended Audience

This manual is intended for technicians, which must have knowledge on electrical systems.

3.3   General Precautions

The user must operate an M-Duino according to the performance specifications described in this manual.

Before using M-Duino under different conditions from what has been specified in this manual or integrating M-Duino to nuclear control systems, railroad systems, aviation systems, vehicles, combustion systems, medical equipment, amusement machines, safety equipment and other systems, machines, and equipment that may have a serious influence on lives and property if used improperly, consult your INDUSTRIAL SHIELDS representative. Ensure that the rating and performance characteristics of M-Duino are sufficient for the systems, machines, and equipment, and be sure to provide the systems, machines, and equipment double safety mechanisms. This manual provides information for programming and operating the M-Duino.

	2.6	INT2	PIN20	2.0	INT0	PIN20

Check this link for more information.

6   Software interface

Industrial Shields PLC are programmed using Arduino IDE, which is a software based on the C language. They can also be programmed directly using C but it is much easier working with Arduino IDE as it provides lots of libraries that help in the programming.

Industrial Shields provide boards for programming the PLCs much easier. Basically it is not needed to define the pins and if those pins are inputs or outputs. Everything is set up automatically if using the boards.

In order to install Industrial Shields boards, these are the steps that must be followed.

Requirements:

Arduino IDE 1.8.15 or above (better to always have the latest version).

Steps:

1. Open Arduino IDE and go to: "File -> Preferences" located in the top left corner.
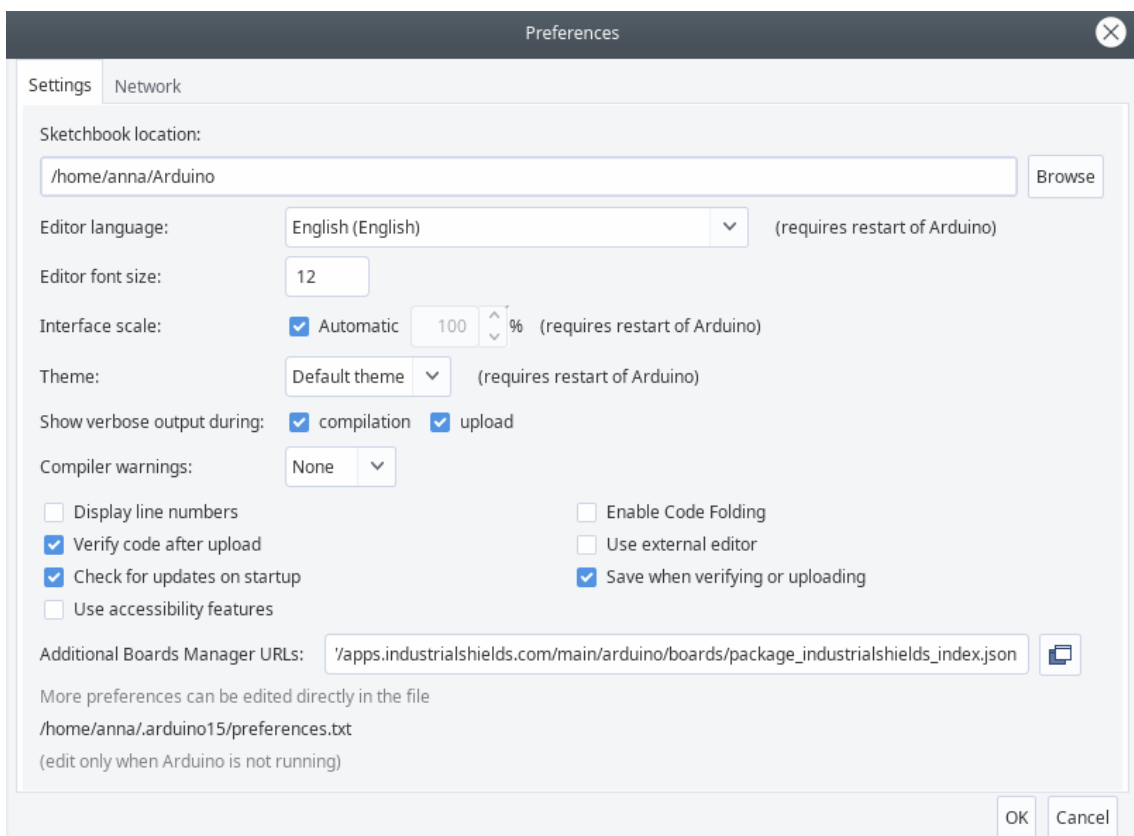

2. In Additional Boards Manager URLs write the following:

http://apps.industrialshields.com/main/arduino/boards/package_industrialshields_index.json

3. Press OK to save the changes.

4. Go to: Tools -> Board: … -> Boards Manager
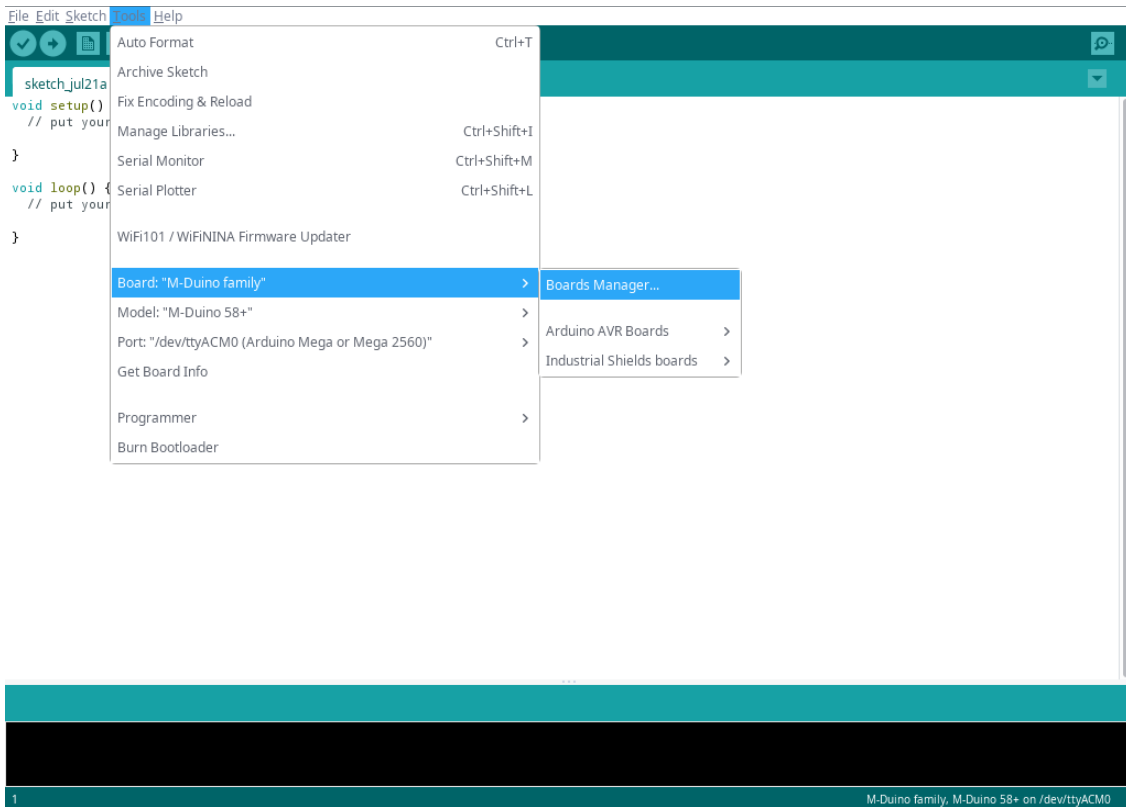

5. Search for "industrialshields" on the browser.
6. Click install (selecting the latest version).

Following these steps you will be able to see now the Industrial Shields Boards:
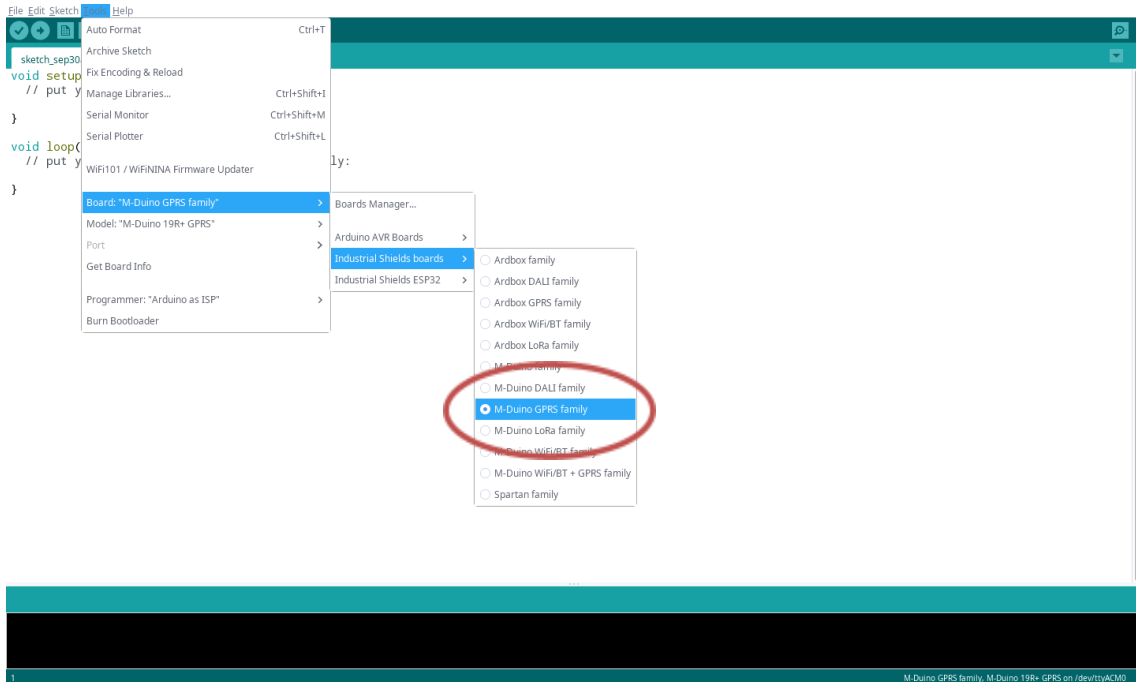

Once it is selected M-Duino GPRS Family, an extra option will appear on Tools:

There, it can be selected the exact model for every family.
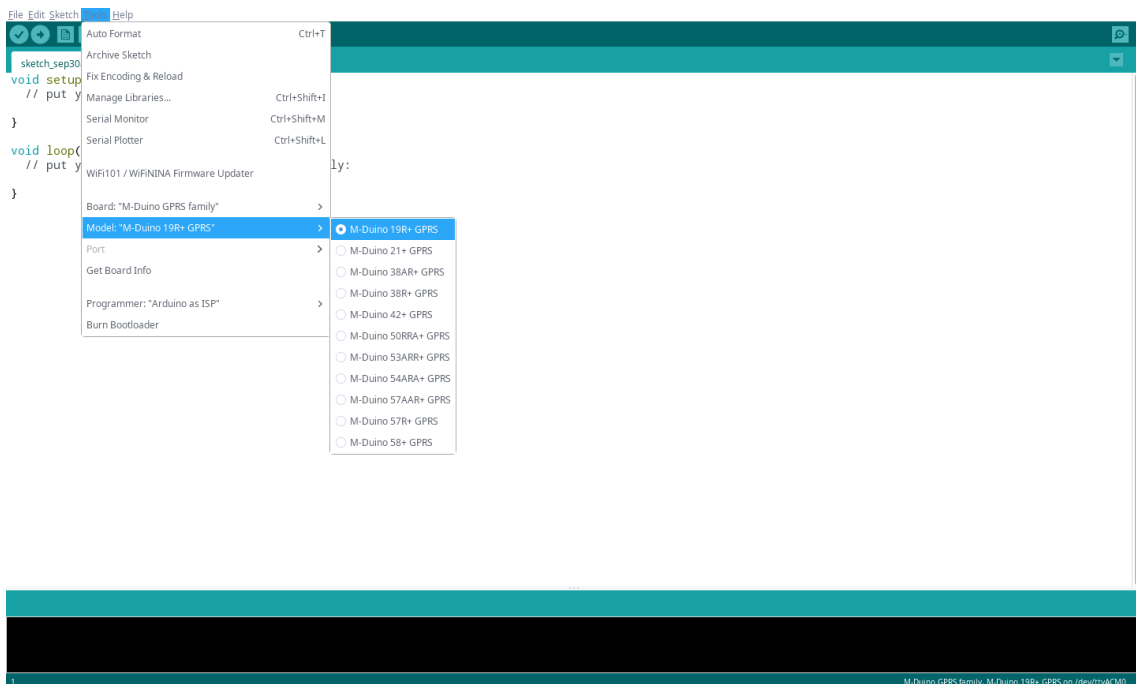

Also there are some examples of programming in File -> Examples -> Examples for M-Duino GPRS family.

Furthermore there are some extra libraries that can be found in Industrial Shields github.

https://github.com/IndustrialShields/

7   How to connect PLC Arduino to PC

- Connect USB port from PLC to PC.

> **NOTE:**
> M-Duino GPRS Family uses B-USB cable.

- Open Arduino IDE interface:

- Select Industrial Shields boards -> M-Duino GPRS Family

- Select the correct M-Duino Board (M-Duino 19R+ GPRS in our example).
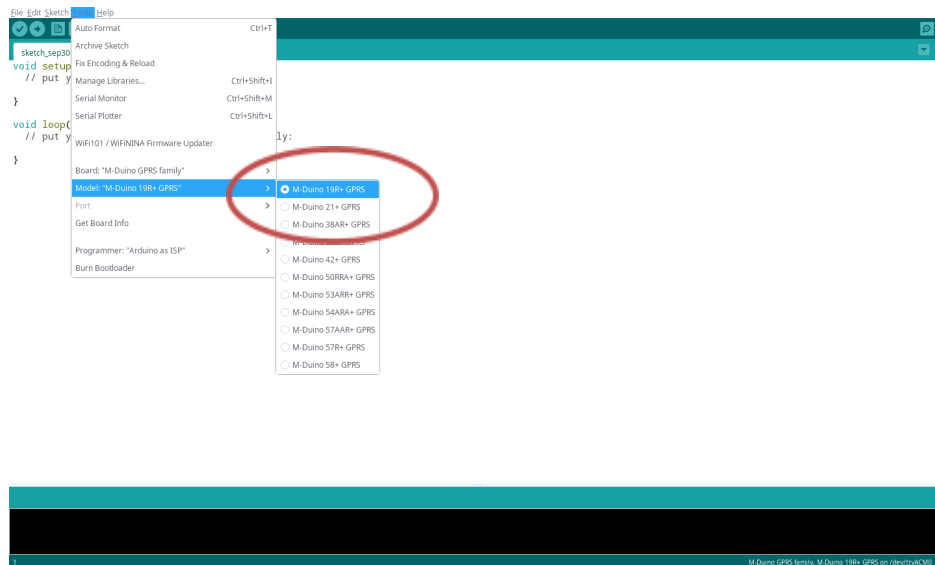

- Select the correct port.
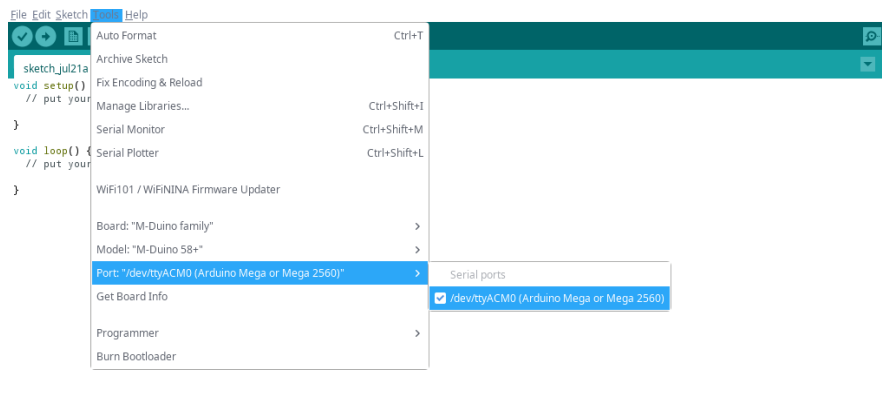

8   How to connect PLC to power supply

- M-Duino GPRS Family PLCs are 12-24Vdc supplied. IMPORTANT: The polarity **IS NOT REVERSAL!**
- Make sure that the live and GND connector of the power supply match the PLC.
- Make sure that the power supply mains output is not higher than 24Vdc.
- Suggested power suppliers

Compact DIN rail power supply. Assembled on 35mm DIN Rail:
-12Vdc / 24Vdc
-2.5A
-30W

Industrial Shields power supplies provide parallel operation, overvoltage protection, and overcurrent protection. There is a LED inductor for power status, the power supply is certified according to UL.

The standard, Part 1 of IEC 61010, sets the general safety requirements for the following types of electrical devices and their accessories, regardless of where use of the device is intended.

The equipment must be powered from an external power source in accordance with IEC 61010-1, whose output is MBTS and is limited in power according to section 9.4 of IEC 61010-1.

WARNING: Once the equipment is installed inside an electrical cabinet, the MTBS cables of the equipment must be separated from the dangerous voltage cables.

9 Switch configuration

9.1 A Zone: Communications

A Zone		
Switch	**OFF**	**ON**
SCL | XX	SCL	XX
SDA | XX	SDA	XX
NC | XX	NC	XX
NC | XX	NC	XX
Pin 3 | XX	Pin 3	XX
NC | XX	NC	XX
SD | XX	SD	XX
FD | HD	FD	HD
This is an D Zone Switch example from M-Duino 58+ GPRS. In this case, SCL, SDA, Pin 3, SD and FD are enabled. This means I2.6, I2.5, I1.6, I1.5, I0.6, Q2.0 and HD are disabled.

4. SCL | XX: Choosing between SCL or the input XX. If the switch is ON, it enables XX and disables SCL. If the switch is OFF, it enables SCL and disables XX. The serigraphy in the PLC will indicate which input is referred to XX.

3. SDA | XX: Choosing between SDA or the input XX. If the switch is ON, it enables XX and disables SDA. If the switch is OFF, it enables SDA and disables XX. The serigraphy in the PLC will indicate which input is referred to XX.

2. NC | XX: Choosing between NC or the input XX. If the switch is ON, it enables XX. If the switch is OFF, it disables XX. The serigraphy in the PLC will indicate which input is referred to XX.

1. NC | XX: Choosing between NC or the input XX. If the switch is ON, it enables XX. If the switch is OFF, it disables XX. The serigraphy in the PLC will indicate which input is referred to XX.

4. Pin 3 | XX: Choosing between Pin 3 or the input XX. If the switch is ON, it enables XX and disables Pin 3. If the switch is OFF, it enables Pin 3 and disables XX. The serigraphy in the PLC will indicate which input is referred to XX.

3. NC | XX: Always at OFF position. Pin 2 and I0.5 are used by the Sim800L module (The GPRS/GSM module). The serigraphy in the PLC will indicate which input is referred to XX.

2. SD | XX: Choosing between SD or the input XX. If the switch is ON, it enables XX and disables SD. If the switch is OFF, it enables SD and disables XX. The serigraphy in the PLC will indicate which input is referred to XX.

1. FD | HD: Choosing between FD or HD. If the switch is ON, it enables HD and disables FD. If the switch is OFF, it enables FD and disables HD. Note: HD stands for Half Duplex and FD means Full Duplex. Check section 11.2 for more information.

| A Zone		
Switch	**OFF**	**ON**
NC	-	-
NC	-	-
NC | RTC	-	RTC
NC | RTC	-	RTC
This switch enables the communication with RTC using I2C. Having both switches in ON mode activates the communication, whereas if they are in OFF mode I2C is disabled to reach the RTC.

9.2   Digital/Analogic Shield Switches

Digital/ Analogic Shield Switch		
Switch	**OFF**	**ON**
NC	-	-
AX.7 | QX.7	AX.7	QX.7
AX.6 | QX.6	AX.6	QX.6
AX.5 | QX.5	AX.5	QX.5

*X can change depending on which zone we are in. Check the serigraphy in the PLC to know what number takes X.
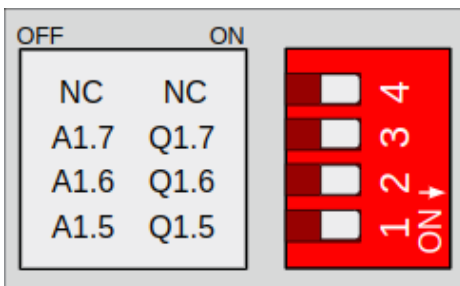

We can see here an example switch from the C Zone (Notice that X takes value 1 here).

For the Analog Shield if a switch is set to ON, it can only act as Digital Output. If it is set to OFF it can only act as an Analog Output.

If it is desired to use a Digital Output the switch must be set to ON and the pin that will provide this digital output is represented with QX.X, being X any number of the table above.
If it is desired to use an Analog Output the switch must be set to OFF and the pin that will provide this digital output is represented with AX.X, being X any number of the table above.

*IMPORTANT: In D Zone, output A2.7 \| Q2.7 is not connected.

9.3   Relay Shield Switches

Relay Shield Switch		
Switch	**OFF**	**ON**
NC	-	-
AX.2 | QX.2	AX.2	QX.2
AX.1 | QX.1	AX.1	QX.1
AX.0 | QX.0	AX.0	QX.0

*X can change depending on which zone we are in. Check the serigraphy in the PLC to know what number takes X.

We can see here an example switch from the B Zone (Notice that X takes value 0 here).

For the Relay Shield if a switch is set to ON, it can only act as Digital Output. If it is set to OFF it can only act as an Analog Output.

If it is desired to use a Digital Output the switch must be set to ON and the pin that will provide this digital output is represented with QX.X, being X any number of the tables above.

If it is desired to use an Analog Output the switch must be set to OFF and the pin that will provide this digital output is represented with AX.X, being X any number of the tables above.

*IMPORTANT: In D Zone, output A2.2 | Q2.2 is not connected.

10   M-Duino Arduino I/Os 5V pins

The M-Duino has some of the Mega board pins available. These pins can be programmed according to Arduino features such as I/Os operating at 5V or any additional features present in the pins (for example I2C communication in pins SCL and SDA). As these pins are directly connected to the Arduino Mega board they are not as well protected as the normal inputs. These pins are mainly meant to be used as prototyping.

The Arduino board available pins are summarised in the table below. In order to access some of these pins the configuration switch must be set to OFF position (see section 9) and some extra considerations must be taken in consideration when using these pins.

M-Duino terminal	Arduino pin	Enable Arduino pin
SCL	21	Communication switch: OFF
SDA	20	Communication switch OFF
RX0	0	
TX0	1	
RX (RS232)	17	
TX (RS232)	16	
MISO	50	
MOSI	51	
SCK	52	
Pin 3	3	Communication switch: OFF

⚠️ ***IMPORTANT:** Do not connect the terminals in the chart above to voltages higher than 5V. These terminals provide direct access to the Mega board.

Apart from the switch configuration there are some special conditions depending on these 5V. Now it is going to be shown the considerations to operate with these pins.

10.1   I2C pins – SDA/SCL

The I2C protocol is meant to work in a pull-up configuration. A pull-up configuration means that when the pin is at rest (nothing connected to it) it always reads a HIGH value. In this case it reads 5V when nothing is connected. The pull-up configuration is established by default in these pins.

 If it is meant to use them as an internal arduino direct PIN at 5V, it has to be considered that they are pull-up inputs (2200Ω resistor is used in the internal pull-up).

10.2 Serial 0 – RX0/TX0

The Serial0 protocol can work also as a 5V pin. These pins should be used ultimately, only in case that all the 5V pins are already performing a function. This is because they are shared with the USB interface. If using these pins, the USB communication cannot be working at the same time.

When the PLC is not installed, the USB communication is normally required for debugging, uploading and intercommunicating with the Ethernet controller. If using both interfaces at the same time the Arduino board will get blocked.

These pins are not established with a pull-up or a pull-down configuration. The state of these pins is unknown. If these pins must be used, they require a pull-up or a pull-down configuration. The Arduino board allows the pins to be set in a pull-up configuration. If not it must be established as an external pull-up or pull-down circuit in order to correctly work with these pins.

10.3 SPI – MISO/MOSI/SCK

These pins can only work as 5V pins if the Ethernet protocol is not going to be used. As the Ethernet protocol uses the SPI to communicate with the Arduino board, both behaviours cannot happen at the same time as the Ethernet would not work.

These pins are not established with a pull-up or a pull-down configuration. The state of these pins is unknown. If these pins must be used, they require a pull-up or a pull-down configuration. The Arduino board allows the pins to be set in a pull-up configuration. If not it must be established as an external pull-up or pull-down circuit in order to correctly work with these pins.

10.4 Pin 3

To know how to configure this pin correctly, check section 9.

This pin is not established with a pull-up or a pull-down configuration. The state of the pin is unknown. If the pin must be used, it requires a pull-up or a pull-down configuration. The Arduino board allows the pin to be set in a pull-up configuration. If not it must be established as an external pull-up or pull-down circuit in order to correctly work with this pin.

11   A Zone Features: Communications & RTC & uSD

11.1 RS-232

The Arduino Mega function code to access the RS-232 port in the M-Duino is Serial2 (pins 16 and 17 of the Arduino Mega).

For the RS-232 communication protocol there isn't any switch that affects it. So it does not matter the configuration of the switches to implement a RS-232 communication.

Using the boards of Industrial Shields, there is a library that simplifies the RS-232 implementation.

Click here[5] or here[6] to see more about this communication.

11.2 RS-485

For RS485 communication protocol the defined Arduino Mega pins are shown in the chart below.

Function	Arduino Pin
DI	14
RO	15
RE	11
DE	46

For the RS-485 communication protocol there is only one switch that affects this communication. The RS-485 protocol will be always enabled, the only switch that affects is the one called "FD rs-485 HD" (See Section 9). This switch makes the choice between RS-485 Half Duplex or RS-485 Full Duplex (RS-422).

Using the boards of Industrial Shields, there is a library that simplifies the RS-485 implementation.

Click here[7] or here[8] to see more about this communication.

---

[8] https://www.industrialshields.com/blog/arduino-industrial-1/post/how-to-connect-two-industrial-plcs-through-rs-485-213

11.3 I2C

I2C communication **DOES NOT REQUIRE** a pull-up resistor for the M-Duino. The pull-up resistor is already implemented in the PCB.

I2C communication is configured by switches, so the switches must be configured in order to enable the I2C communication (See section 9 for more information).

Industrial Shields does not provide any library to implement the I2C as it can be used with the standard library of Arduino called Wire.

Click here[9] to see more about this communication.

11.4 SPI

The M-Duino pins used for the SPI bus are summarised in the table below. For SPI bus MISO, MOSI and CLOCK pins are common to all the connected devices to the M-Duino, conversely, each of the connected devices will have a single and dedicated SS pin.

Function	M-Duino connection	Mega board pin
MISO	50 S0	50
MOSI	51 SI	51
CLOCK	52 SCK	52
Reset	Reset	Reset
SS	SCL/SDA/RX0/TX0/RX/TX/Pin3	21/20/1/0/16/17/3

Check the switch configuration at section 9 to enable SS pins.

Click here[10] to see more about this communication.

11.5 TTL

M-Duino has two TTL ports, RX0/TX0 and RX/TX. TTL0 is accessed with the function Serial (pins 0 and 1 of the Arduino Mega) and TTL2 is accessed with the function Serial2 (pins 16 and 17 of the Arduino Mega). See section 9 for more information.

11.6 Ethernet

M-Duino Ethernet port controller is based on w5500 IC, which is the IC compatible with Arduino Ethernet2 Shield libraries. All Ethernet shield Arduino libraries are compatible with the M-Duino. In the M-Duino, W5500 IC communicates to the Mega board via SPI bus (SS Arduino Mega pin 10).

Click here[11] and here[12] to see more about this communication.

11.7 GPRS & GSM

The SIM800L module is the integrated module for the use of GPRS / GSM in this PLC. Its principal features are:

- Quad-band 850/900/1800/1900MHz.
- Work only with 2G technology.
- Can send / receive SMS messages.
- Can send / receive GPRS data (TCP/IP, HTTP, MQTT).
- Controlled by AT Commands (3GPP TS 27.0077, 27.005 and SIMCOM enhanced AT Commands).
- AT Command interface with transmission speed "automatic" detection.
- Max. transmission speed: 85.6 Kbps.
- Serial transmission speed: 1200 bps up to 115200 bps (Baud rate).
- SIM size: Micro SIM.

When defining the pins in the program, take into account that the internal connections between the SIM800L module and the Arduino Leonardo are the following:

Arduino Leonardo Pinout	SIM800L Pinout
5Vdc	Vcc
GND	GND
Rx1 (Pin 19)	TxD
Tx1 (Pin 18)	RxD
Pin 2	GPRS RESET

The GPRS / GSM protocol is always enabled as there are no switches that configure it. The protocol uses the SPI pins of the equipment to be able to communicate and the Pin 2 for the module reset.

11.8 RTC

M-Duino RTC Module is based on the DS1307 Chip. This chip works with the I2C protocol communication, so it is required to have enabled the I2C protocol. This means 4 switches have to be configured in order to enable the RTC features.

RTC SCL & RTC SDA must be set to ON mode to enable the I2C wires to the RTC. If they are in OFF mode, the Arduino won't communicate with the RTC. Look at <u>section 11.3</u> for more information.

Using the boards of Industrial Shields, there is a library that simplifies the RTC implementation called RTC.

Click [here](#)[13] to see more about this feature.

11.9 uSD

The micro SD uses the SPI communication to interact with the Arduino Mega. The SPI protocol is always enabled, as there are no switches that configure it. However, there is a switch that must be placed to ON mode in order to communicate with the uSD:

SD: If this Switch is OFF, it enables the Chip Select of the microSD socket. If the switch is in ON mode the microSD can't be used. Check [section 9](#) for more information.

The uSD socket is found in the TOP part of the communication Shields, so in the frontal part of the PLC, it is required to open the plastic found in the frontal part and the socket is located under the supply of the Arduino.

Using the boards of Industrial Shields, there is a library that simplifies the uSD implementation called SD. It is the same as the Arduino library, with the only modification of using the pin 53 to select the Chip Select of the uSD chip.

Click [here](#)[14] to see more about this feature.

⚠️ **Verify that the CPU is not actively running a process before inserting the memory card.**

Inserting a memory card will cause the CPU to go to STOP mode, which could affect the operation of an online process or machine. Unexpected operation of a process or machine could result in death or injury to personnel and/or property damage. Before inserting a memory card, always ensure that the CPU is offline and in a safe state.

⚠️ **Vérifiez que le processeur n'exécute pas activement un processus avant d'insérer la carte mémoire.**

Si vous insérez une carte mémoire, la CPU passe en mode STOP, ce qui peut affecter le fonctionnement d'un processus ou d'une machine en ligne. Le fonctionnement inattendu d'un processus ou d'une machine peut entraîner la mort ou des blessures corporelles et / ou des dégâts matériels. Avant d'insérer une carte mémoire, assurez-vous toujours que la CPU est hors ligne et en sécurité.

12 GPRS & GSM Programming Examples

12.1 How to use the GPRS Module

By following the steps on this [blog][15], you will learn how to work with the GPRS Module that is inside the PLC. A brief explanation about the examples provided by the Industrial Shields libraries from GPRS is done.

12.2 How to send SMS using GPRS from an M-Duino

Two blogs about how SMSs can be sent using GPRS have been written. The first one talks about sending SMS when a temperature sensor reaches a certain threshold. You can find the blog [here][16].

The second one is about general features of the GPRS module and describes an example from Adafruit FONA libraries. Click this [link][17] to go to the blog.

16   Connector details

The connector inside the PLCs that mounts on the PCB is MC 0,5/10-G-2,5 - 1881529[18] connector from Phoenix contact.

In the PLC we can find other connectors too, and these are the references for them:
MC 0,5/ 4-G-2,5 - 1881464

MC 0,5/ 6-G-2,5 - 1881480

MC 0,5/ 9-G-2,5 - 1881516

Connection details (10 pins):

Article reference	MC 0,5/10-G-2,5 - 1881529
Height	8.1 mm
Pitch	2.5 mm
Dimension	22.5 mm
Pin dimensions	0.8 x 0.8 mm
Pin spacing	2.5 mm

---

[18] https://www.phoenixcontact.com/en-us/products/pcb-header-mc-0510-g-25-1881529

For I/O and power supply there is a [FK-MC 0,5/10-ST-2,5 - 1881406](#)[19] connector from Phoenix contact.

In the PLC we can find other connectors too, and these are the references for them:
FK-MC 0,5/ 4-ST-2,5 - 1881341

FK-MC 0,5/ 6-ST-2,5 - 1881367

FK-MC 0,5/ 9-ST-2,5 - 1881396

Connection details (10 pins):

17 DIN Rail mounting

For optimal operation of the product, it must be located in an electrical cabinet with IK08 mechanical protection. The minimum IP protection degree required is IP56.

18 Installation and Maintenance

Notes for installation:

- The installation position should be free from the following: dust or oil smoke, conductive dust, corrosive or flammable gas, high temperature, condensation, and rain.
- Besides, vibration and impact also affect the PLC normal operation and shorten its lifespan; electric shock, fire or misact also damages the product. During drilling or wiring, prevent the metal particles or wire segments from falling into the PLC casing, which may cause fire, fault or misact.

- After the PLC installation, clean the ventilation duct to prevent blocking, which may cause bad ventilation, or even fire, faults or misact.
- Do not online connect, plug or unplug cables, which are apt to cause electric shock or damage the circuit. Installation and wire connection must be firm and reliable. Poor connection could cause misact.
- Use shielded twisted pair for the I/O of high frequency signal and analog signal to improve system IMS.

The installation environment should be free from dust, oil smoke, conductive particles, corrosive or flammable gases, high temperature, condensation, and rain.

Besides, vibration and impact also affect the PLC normal operation and shorten its lifespan. It is recommended to install the PLC, together with the matching switches and contactors, in a dedicated electric cabinet and keep the cabinet ventilated. If the location has high ambient temperature or heat generating equipment nearby, install forced convection devices on top or sides of the cabinet to avoid over-temperature. During drilling or wiring, prevent the metal particles or wire segments from falling into the PLC casing, which may cause fire, fault or misact. After the PLC installation, clean the ventilation duct to prevent blocking, which may cause bad ventilation, or even fire, faults or misact.

The only way to disconnect the equipment from the electrical network is by removing the connectors that feed the equipment. Once installed in the electrical cabinet it is very important to ensure the power connectors for proper operation.

Separate the M-Duino Family PLC from heat, high voltage and electrical noise:

Always separate the devices that generate high voltage and high electrical noise from the M-Duino. When configuring the layout of the M-Duino inside your panel, consider the heat-generating devices and locate the electronic-type devices in the cooler areas of your cabinet. Reducing the exposure to a high-temperature environment will extend the operating life of any electronic device. Consider also the routing of the wiring for the devices in the electric cabinet. Avoid placing low-voltage signal wires and communications cables in the same tray with AC power wiring and high energy, rapidly-switched DC wiring.

Provide adequate clearance for cooling and wiring M-Duino. Is designed for natural convection cooling. For proper cooling, you must provide a clearance of at least 25 cm above and below the devices. Also, allow at least 25 cm of depth between the front of the modules and the inside of the enclosure.

Notes for maintenance:

A well-planned and executed maintenance program is essential to the satisfactory operation of solid-state electrical equipment. The kind and frequency of the maintenance operation will vary with the kind and complexity of the equipment as well as with the nature of the operating conditions. Maintenance recommendations of the manufacturer or appropriate product standards should be followed.

The following factors should be considered when formulating a maintenance program:

- Maintenance must be performed by qualified personnel familiar with the construction, operation, and hazards involved with the control.
- Maintenance should be performed with the control out of operation and disconnected from all sources of power.
- Care should be taken when servicing electrostatic sensitive components. The manufacturer's recommendations for these components should be followed.
- Ventilation passages should be kept open. If the equipment depends upon auxiliary cooling, e.g., air, water, or oil, periodic inspection (with filter replacement when necessary) should be made of these systems.
- The means employed for grounding or insulating the equipment from ground should be checked to assure its integrity.
- Accumulations of dust and dirt on all parts, including on semiconductor heat sinks, should be removed according to the manufacturer's instructions, if provided; otherwise, the manufacturer should be consulted. Care must be taken to avoid damaging any delicate components and to avoid displacing dust, dirt, or debris in a way that permits it to enter or settle into parts of the control equipment.
- Enclosures should be inspected for evidence of deterioration. Accumulated dust and dirt should be removed from the top of the enclosures before opening doors or removing covers.
- Certain hazardous materials removed as part of maintenance or repair procedure (e.g., polychlorinated biphenyls (PCBs) found in some liquidfilled capacitors) must be disposed of as described in Federal regulations.

Safety rules for maintenance personnel

Consider the following steps to follow. A false manoeuvre could be the cause of an accident or material damage.
Do not disassemble or modify the modules. This could lead to breakdowns or malfunctions and could lead to injuries or fire.

- All types of radio communication devices, including mobile phones and personal handy-phone systems (PHS), must be kept more than **25cm** away from the PLC in all directions. Failure to observe this precaution exposes malfunctions caused by an excess of temperature.
- Disconnect the external power supply of the system (on all phases) before connecting or disconnecting a module. Failure to observe this precaution may cause faults or malfunctions of the module.
- Tighten the screws of the terminal ports and the screws of the connectors within the prescribed tightening torque. Insufficient tightening can lead to loose parts or wires and cause malfunctions. Excessive tightening can damage the screws and / or the module, with the risk of falling, short circuits and malfunctions.
- Before handling a module, dispose of the electrostatic charge accumulated by the human body by touching a suitable conductive object. Failure to observe this precaution may cause faults or malfunctions of the module.

Repair note:

If the equipment is suitable to be repaired, it must be verified that the equipment remains in a safe state after repair.

19   Revision Table

Revision Number	Date	Changes
0	29/08/2019	First implementation
1	02/03/2020	Second implementation
2	23/11/2020	Third implementation
3	30/09/2022	M-Duino GPRS Family User Manual Implementation
